Average SEO score of top 100 sites: 74%

This website received an SEO score of **80 out of 100**, which is higher than the average score of **74**. Our analysis has identified **8 important issues** that can be addressed to further enhance your website's performance and improve its search engine visibility.

8 Failed

3 Warnings

50 Passed

Issues to fix

HIGH

To improve the website experience for your visitors, it is recommended to eliminate any render-blocking resources on this webpage.

HIGH

Build quality backlinks from websites relevant to your topic/niche to improve your search engine rankings.

HIGH

Using images in a modern format can significantly reduce the file size and improve the loading speed of a webpage, providing a better user experience and potentially increasing engagement.

MEDIUM

Serve properly sized images to reduce page loading times and to improve user's experience.

MEDIUM

Avoid using distorted images, as they can have a negative impact on the user experience.

MEDIUM

By creating a custom 404 error page with helpful links and information, users are more likely to stay on the site and continue to explore.

LOW

Without an SPF record, spammers can easily spoof emails from this domain, potentially leading to compromised email security and deliverability issues.

i Most Common Keywords Test

There is likely no optimal keyword density (search engine algorithms have evolved beyond keyword density metrics as a significant ranking factor). It can be useful, however, to note which keywords appear most often on your page and if they reflect the intended topic of your page. More importantly, the keywords on your page should appear within natural sounding and grammatically correct copy.

14 votre 14 pour 13 neurofeedback 10 vous 9 google

✓ Keywords Usage Test

The most common keywords of this webpage are distributed well across the important HTML tags. This helps search engines to properly identify the topic of this webpage.

Keyword	Title tag	Meta description	Headings
votre	×	×	✓
pour	×	×	✓
neurofeedback	✓	✓	✓
vous	×	×	×
google	×	×	×

Sitemap Test

This website has a sitemap file.

<https://neuromaroc.com/sitemap.xml>

! Image Alt Test

This webpage is using "img" tags with empty or missing "alt" attribute!

How to pass this test?

In order to pass this test you must add an **alt** attribute to every **** tag used into your webpage.

An image with an alternate text specified is inserted using the following HTML line:

```

```

Remember that the point of alt text is to provide the same functional information that a visual user would see. Search engines, users who disabled images in their browsers and other agents who are unable to see the images on your webpage can read the alt attributes assigned to the image since they cannot view it.

Learn more about [optimizing images for SEO](#).

✖ Responsive Image Test

Not all images in this webpage are properly sized! This webpage is serving images that are larger than needed for the size of the user's viewport.

How to pass this test?

This issue can be fixed by using responsive images, which relies on creating multiple versions of each image, that are served via CSS media queries depending on the user's viewport dimensions.

Another solution can be to use vector-based image formats like SVG. SVG images scale appropriately to any size, without wasting unnecessary bandwidth. Also consider image CDNs that can help serve responsive images.

✖ Image Aspect Ratio Test

Not all image display dimensions match the natural aspect ratio! Fix aspect ratio issues to avoid distorted images on this website!

How to pass this test?

There are two common causes for an incorrect image aspect ratio:

- An image is set to explicit width and height values that differ from the source image's dimensions.
- An image is set to a width and height as a percentage of a variably-sized container.

To help avoid these issues, consider using an image CDN, to help automate the process of creating different size versions of your image.

Also check any CSS that can affects the image's aspect ratio - if you're having trouble finding the CSS that's causing the incorrect aspect ratio, Chrome DevTools can show you the CSS declarations that affect a given image.

Finally, check the image's width and height attributes in the HTML. When possible, it's good practice to specify each image's width and height attributes in your HTML so that the browser can allocate space for the image. This approach helps to ensure that content below the image doesn't shift once the image is loaded.

✔ Deprecated HTML Tags Test

This webpage does not use HTML deprecated tags.

✔ Google Analytics Test

This webpage is using Google Analytics.

✔ Favicon Test

This website appears to have a favicon.

✖ Backlinks Test

This domain has **56 backlinks** from **45 referring domains** and a rank of **0/1000** while the average rank of Top 100 sites is **895/1000**.

✔ JS Error Test

There are no severe JavaScript errors on this webpage.

✓ Console Errors Test

This webpage doesn't have any warnings or errors caught by the Chrome DevTools Console.

✓ Charset Declaration Test

This webpage has a character encoding declaration.

```
Content-Type: text/html; charset=utf-8
```

✓ HTML Page Size Test

The size of this webpage's HTML is **9.78 Kb** and is under the average webpage's HTML size of **33 Kb**. Faster loading websites result in a better user experience, higher conversion rates, and generally better search engine rankings.

✓ DOM Size Test

The Document Object Model (DOM) of this webpage has **353 nodes** which is less than the recommended value of 1,500 nodes.

✓ HTML Compression/GZIP Test

This webpage is successfully compressed using **br compression** on your code. The HTML code is compressed from **53.33 Kb** to **9.78 Kb** (**82% size savings**). This helps ensure a faster loading webpage and improved user experience.

✓ Site Loading Speed Test

The loading time of this webpage (measured from N. Virginia, US) is around **2.42 seconds** and this is under the average loading speed which is **5 seconds**.

✓ JS Execution Time Test

The JavaScript code used by this webpage is executed in less than **2 seconds**.

✔ Page Objects Test

This webpage has less than 20 http requests. A higher number of http requests results in a user's browser needing to request a large number of objects from the server, which will ultimately slow down the loading of your webpage.

Content size by content type

Content type	Percent	Size
Image	73.7 %	1.23 Mb

fonts.gstatic.com	8.3 %	1
gstatic.com	8.3 %	1
TOTAL	100%	12

! CDN Usage Test

This webpage is not serving all resources (images, javascript and css) from CDNs!

How to pass this test?

In order to pass this test you are advised to use a CDN service. A Content Delivery Network (CDN) is a globally distributed network of web servers that allows a quick transfer of assets and provides high availability and high performance. The primary benefits of using a CDN service are:

- Improving website loading times
- Reducing bandwidth costs
- Increasing content availability and redundancy
- Improving website security

✖ Modern Image Format Test

This webpage is not serving images in a modern format! Image formats like [JPEG 2000](#), [JPEG XR](#), and [WebP](#) often provide better compression than PNG or JPEG, which means faster downloads and less data consumption.

How to pass this test?

In order to pass this test, convert all the images listed in this report into a modern image format such as [JPEG 2000](#), [JPEG XR](#) or [WebP](#).

It's important to understand that the modern image formats, like WebP, are not yet widely supported across all devices and browsers. You can find [here](#) a full list of supported browsers and devices for the WebP format.

If your target audience falls within one of the unsupported browser/device categories, you should serve optimized fall-back images in the original JPEG/PNG format so that your users don't see a broken or badly designed page:

```
<!--Before:-->

<!--After:-->
<picture>
  <source type="image/webp" srcset="image.webp">
  
</picture>
```

The browser uses the first listed source that's in a format it supports. If the browser does not support any of the formats listed in the "source" tags, it falls back to loading the image specified by the "img" tag.

✔ Image Metadata Test

This webpage is not using images with large metadata.

✔ Image Caching Test

This website is using cache headers for images and the browsers will display these images from the cache.

✔ JavaScript Caching Test

This webpage is using cache headers for all JavaScript resources.

✔ CSS Caching Test

This webpage is using cache headers for all CSS resources.

✓ JavaScript Minification Test

All JavaScript files used by this webpage are minified.

✓ CSS Minification Test

All CSS resources used by this webpage are minified.

✗ Render Blocking Resources Test

This webpage is using render blocking resources! Eliminating render-blocking resources can help this webpage to load significantly faster and will improve the website experience for your visitors.

How to pass this test?

In order to pass this test, you have to reduce the impact of render-blocking resources.

First, you have to identify what's critical and what's not. You can use the [Chrome DevTools \(Coverage tab\)](#) to identify non-critical CSS and JS.

Once you've identified critical code, you can try the below methods to eliminate render-blocking resources:

- inline critical JS within a script tag in your HTML document
- inline critical CSS required for the first paint inside a style block in the head of the HTML document
- move the script and link tags at the end of the HTML document
- add async or defer attributes to non-critical script or link tags
- split CSS styles into different files, organized by media query
- compress and minify your text-based resources

✓ URL Redirects Test

This URL doesn't have any redirects (which could potentially cause site indexation issues and site loading delays).

✓ Largest Contentful Paint Test

The Largest Contentful Paint duration of this webpage is 2.48 seconds. To provide a good user experience, [Google recommends](#) that sites should strive to have Largest Contentful Paint of 2.5 seconds or less.

Largest Contentful Paint element within the viewport:

```

```

✓ Cumulative Layout Shift Test

The CLS score of this webpage is 0.0012. To provide a good user experience, [Google recommends](#) that sites should strive to have a CLS score of 0.1 or less.

DOM element which contributes the most to CLS score:

Html:

Score: 0.0012

Structured Data Test

This webpage is using structured data.

✖ Custom 404 Error Page Test

This website is not using a custom 404 error page! Default 404 error pages result in a poor experience - it can mislead users into thinking an entire site is down or broken, greatly increases the chance they leave the website entirely, and looks unprofessional. We recommend to have a custom 404 error page in order to improve the website's user experience by letting users know that only a specific page is missing/broken (and not the entire site), providing them helpful links, the opportunity to report bugs, and potentially [track the source of broken links](#).

How to pass this test?

Creating a custom 404 error page can be relatively simple or more complicated, depending on what technologies were used to build your website (your web server, framework used, etc).

[Learn more about the basics of creating a custom 404 error page](#).

On your custom error page, you should provide relevant information to keep the user's attention so they remain on your website. Some steps to achieve this goal include:

- Adding links to your most important pages (your best articles/content, latest posts, etc.)
 - If you have an e-commerce business, you can display special offers, product recommendations, discounts, etc.
 - Include a search box or a sitemap link to help users find the information they wanted.
 - Use simple language (non-technical) to explain what went wrong.
 - Add a contact form or provide an email address to allow users to get in touch with you for further help.
- You can also use your custom 404 error page to [track the source of broken links in your site](#).

✔ Noindex Tag Test

This webpage does not use the noindex meta tag. This means that it can be indexed by search engines.

✔ Canonical Tag Test

This webpage is using the canonical link tag. This tag specifies that the URL: <https://neuromaroc.com/> is preferred to be used in search results. Please ensure that this specification is correct, as canonical tags are often hard-coded and may not always reflect the latest changes in a site's URL structure.

```
<link href="https://neuromaroc.com/" rel="canonical"/>
```

i Nofollow Tag Test

This webpage does not use the nofollow meta tag. This means that search engines will crawl all links from this webpage.

Disallow Directive Test

Your robots.txt file includes a disallow command which instructs search engines to avoid certain parts of your website! You are advised to confirm if access to these resources or pages are intended to be blocked (e.g., if they contain internal-only content or sensitive information).

Meta Refresh Test

This webpage is not using a meta refresh tag.

✖ SPF Records Test

This DNS server is not using an SPF record! SPF (Sender Policy Framework) allows administrators to specify which hosts are allowed to send mail from a given domain by creating a specific SPF record or TXT record in the Domain Name System (DNS). You can find more information about SPF records [here](#).

How to pass this test?

An **SPF record** is a type of **Domain Name Service (DNS)** record that allows email systems to check if the sender of a message comes from a legitimate source and refuse an email if the source is not legitimate. Adding an SPF record is as easy as adding CNAME, MX or A records in your DNS zone. You can find more information [here](#).

Before creating the SPF record for your domain, it is important to have access at your domain's DNS zone and to know what mail servers your domain is likely to use and plan how you want any non-authorized email to be handled.

Example:

Let's say that you are planning to send emails using Google Apps and you also want to ensure that no other mail servers are authorized. You can use an SPF record like this:

```
v=spf1 include:_spf.google.com -all
```

"**v=spf1**" - This sets the SPF version

"**include:_spf.google.com**" - This includes Google mail servers in your list of authorized sending servers

"**-all**" - This means that any server not previously listed is not authorized

If you are using your own VPS to send email and not any other service like Mandrill, Google Apps, etc. then you can create an SPF record like this:

```
v=spf1 mx -all
```

Note:

Setting an SPF record for your domain can help in reducing the chances of a spammer using your domain name in unsolicited emails. Research carefully what mail servers your domain is likely to use and plan how you want any non-authorized email to be handled.

✖ Ads.txt Validation Test

The request of ads.txt file has an unexpected Content-Type header: **text/html; charset=utf-8**. In order for this resource to be easily accessed by the DSPs and advertisers, its Content-Type header should be **text/plain** or **text/plain; charset=utf-8**.

How to pass this test?

In order to pass this test, the **ads.txt** file should be **publicly available** in the website's root domain and its content should be **properly formatted**.

The advertising systems will read the content of the ads.txt file only if the request will return a **200 OK** HTTP status code. The content of this file should be encoded as a formatted plain text and the HTTP Content-Type header should be **text/plain** (all other Content-Types are treated as an error and the content will be ignored).

As outlined in the [IAB Tech Lab specifications for ads.txt file](#), the format logically consists of three types of records: comments, data records and variables:

1. Comments

Lines starting with **#** symbol are considered comments and are ignored.

2. Data records

For each Exchange or Supply-Side Platform (SSP) that is authorized to sell your inventory you must add a data record. Each of these lines should contain 3 or 4 comma separated fields:

<FIELD #1>, <FIELD #2>, <FIELD #3>, <FIELD #4>

- #1 - The canonical domain name of the system where bidders connect (e.g. google.com, appnexus.com, etc)
- #2 - The publisher account ID
- #3 - The type of account or relationship (e.g. DIRECT or RESELLER)
- #4 - (Optional) An ID that uniquely identifies the advertising system within a certification authority

3. Variables

Any line containing a pattern of **<VARIABLE>=<VALUE>** should be interpreted as a variable declaration. The **<VARIABLE>** is a string identifier without internal whitespace. The only supported separator is the equals sign '='. The **<VALUE>** is an open string that may contain arbitrary data.

For human readability it is recommended that variables be declared at the end of the file, but this is not a strict requirement.

Only the following variables are supported: **CONTACT**, **SUBDOMAIN** and **INVENTORYPARTNERDOMAIN**.
